

Devlin Rocha

San Francisco, CA | +1 (650) 504-4974 | devlin@devlinrocha.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Summary

- 6+ years of experience in software engineering
- Specializing in fullstack web development, design, and user experience
- Impacted ~1,000,000 users at Synctree, 40,000+ developers at Google, and 5,000+ projects in 35+ countries at Revolution Entertainment while improving product performance, maintainability, and user experience

Work Experience

Google

June 2025 – Present

Software Developer | Internal Developer Relations Engineer (Contract)

Remote

- Architected, designed, and developed an internal agentic dashboard in Angular and TypeScript featuring an AI-driven documentation suite, global search and filtering interface, and interactive data visualizations
- Established new agentic AI workflows, processes, and tools to automate documentation generation, maintenance, testing, validation, and hygiene
- Bootstrapped new solutions from the ground up, exploring uncharted waters and building new systems involving AI task automation
- Built robust, reusable, and interactive UI components, including a complex data table supporting inline editing, multi-row selection, pagination, dynamic action menus, custom headers, sorting, and filtering
- Created and maintained user guides and technical documentation for internal agentic AI tooling
- Implemented new features and redesigned UI and UX of existing internal production applications to improve usability and workflow efficiency

Lilypad Network

November 2024 – April 2025

Developer Relations Engineer & Content Producer

Remote

- Created and maintained Create Lilypad Module, an npm package downloaded 3,000+ times enabling developers to bootstrap and deploy AI inference modules via Docker
- Maintained AI inference API, created API-compatible modules, implemented OpenAI compatibility, etc.
- Maintained primary website and API documentation website, improving UI, design, and technical copy
- Presented live public and internal events, including hackathon workshops, feature demos, tutorials, etc.
- Wrote, structured, and maintained documentation for AI inference workflows, module deployment, etc.
- Wrote, presented, and implemented engineering proposals for impactful features and DX improvements
- Wrote, recorded, edited, and uploaded high impact videos, from developer tutorials to investor pitches
- Fostered a strong community by acknowledging concerns with transparency from the development team

Synctree

March 2023 – February 2024

Software Engineer

Remote

- Designed and implemented monorepo infrastructure and internal package architecture to improve code reuse and maintainability
- Configured dependencies, established CI/CD pipelines via GitHub Actions, and wrote automation scripts that enhanced the developer experience, streamlined workflows, and improved deployment speed
- Advised clients on best practices and maintainable frontend architecture solutions while rewriting a complex Angular application in React, resulting in improved performance, scalability, and user experience
- Developed custom React applications within Contentful CMS, extending functionality and addressing unique client use cases, improving client operations and system capabilities for ~1,000,000 users
- Created a responsive UI component library in Storybook from Figma design specifications, achieving pixel-perfect accuracy and improving design-to-development workflow

Revolution Entertainment Services

March 2022 – January 2023

Frontend Engineer

San Francisco, CA

- Developed accounting software for production studios using Vue and TypeScript in an agile team, delivering robust and scalable web applications benefiting 5,000+ client projects in 35+ countries
- Built a reusable UI component library for internal use, improving development efficiency
- Implemented strong input validation and increased test coverage by 60% using Chai, improving the software's reliability and security
- Designed and developed user-friendly pages with UX best practices, enabling non-technical users to handle complex accounting tasks efficiently
- Worked directly with stakeholders to identify and address business requirements, ensuring the alignment of development efforts with business goals
- Authored detailed documentation of workflows and processes, improving team efficiency and communication
- Iterated and collaborated on creative solutions, design concepts, and technical approaches, fostering a collaborative and innovative development environment

Freelance

September 2020 – Present

Software Engineer

San Francisco, CA

- Built intuitive, reliable, and scalable web applications, crafting engaging user experiences
- Designed and developed responsive websites, single-page web applications, and landing pages from concept to deployment, ensuring seamless performance through continuous maintenance and iterations
- Transformed mockups into robust web pages, components, and other assets, ensuring high performance, scalability, and adherence to design specifications
- Created mockups, low-fidelity wireframes, and high-fidelity prototypes using Figma, streamlining the design process and ensuring clear communication of design intentions

Programming Projects

Create Lilypad Module

Source – Package

- Enables developers to bootstrap and deploy AI inference job modules via Docker
- Package downloaded 3,000+ times via npm
- Contains templates for using open-source AI models from Hugging Face and Ollama
- Built with Docker, Python, and Shell

Banter

Source – Demo

- Developed a feature-rich fullstack Discord clone, reaching 3,500+ registered users and fostering an active online community of over 5,000 users
- Engineered the application using React, Redux Toolkit, Next.js, TypeScript, Tailwind CSS, and Firebase
- Implemented real-time data submission and retrieval for user authentication, messaging, settings, and more through seamless backend communication

Skills

- **Programming Languages:** TypeScript, JavaScript, Python, Elixir, Go, GDScript, C#, Bash, Shell
- **Frontend Development:** React, Next.js, Redux, Vue, Pinia, Phoenix, TanStack, Astro, Angular, Tailwind
- **Backend Development:** Node.js, Express, tRPC, Zod, Drizzle, Prisma, PostgreSQL, MongoDB, Firebase
- **DevOps and Infrastructure:** Docker, GitHub Actions, CI/CD, Service Workers, Progressive Web Apps
- **Testing and Quality Assurance:** Vitest, Playwright, Jest, Mocha, Chai, TDD, Storybook, UX Design
- **Development Tools:** Vite, ESLint, asdf, pnpm, Bun, Yarn, npm, Webpack, Snowpack, Git, GitHub
- **Software:** Figma, DaVinci Resolve, Logic Pro, FL Studio, Godot Engine, Blender, Linux, macOS, Windows
